

EDR OPTIMUS

Endpoint Protection Detection & Response

Trojan horses, spyware, ransomware: your antivirus can't protect you from unknown threats. Defend all your endpoints with **EDR OPTIMUS** and its autonomous technology.

Traditional antiviruses are outdated in comparison to the **EDR OPTIMUS** technology. Our EDR ensures an optimal protection and a full visibility of your IT assets and is directly integrated into the Windows Security Center.

24/7 monitoring of your endpoints

All your endpoints and servers are protected thanks to our real-time detection and neutralization, without any action being required on your part. **EDR OPTIMUS** combines the features of an **EDR** and a **Next-Gen Antivirus**. Hyper-automate your analyses, detections, isolations and remediations with our **EDR** to achieve a full protection of your infrastructure.

Unmatched detection and neutralization

EDR OPTIMUS blocks attacks before they can reach your IT assets. Our artificial intelligence **CYBERIA**, made of several neural networks (Deep Learning), is unmatched in its detection accuracy of known and unknown threats.

Our EDR also comes with **TEHTRIS Threat Intelligence** to give you all the tools needed for a full protection of your infrastructure: instant

analysis, sandboxing and hunting. Combine it with all the remediation features of our **EDR** (suspend, quarantine, kill and regular disk scans) to neutralize threats in real time.

- ↓ Detection and neutralization 24/7 without human intervention
- ↓ ScanDisk: static files analysis
- ↓ Detections based on AI and/or signatures
- ↓ Mass actions (remote script execution in a secured mode)
- ↓ Suspend, quarantine, kill
- ↓ **Neural networks** (Deep Learning)
- ↓ Customizable automation of the features
- ↓ Access to the **TEHTRIS XDR AI PLATFORM** and its augmented technology (SOAR, Threat Intel, CYBERIA)
- ↓ Dashboards and reporting
- ↓ Available in **Cloud & On-Premises**
- ↓ Compatible with existing ecosystems (APIs)

Orchestrate your cybersecurity

Choose playbooks or create scenarios with **TEHTRIS SOAR** (integrated in our EDR) and keep your teams focused on tasks that really matter.

EDR OPTIMUS is hyper-automated and protects you from cyberattacks 24/7, without human intervention.

BENEFITS

- ▶ Integrated into the Windows Security Center
- ▶ Complete overview to monitor all your endpoints and servers
- ▶ Compatible with your IT & OT environments (ICS, PLC...)
- ▶ Uninterrupted overview of your infrastructure
- ▶ Centralized and remote management
- ▶ Easily and quickly installed and deployed
- ▶ Low CPU, RAM and storage consumption

KEY FEATURES

Govern and manage risk

- Augmented & customizable dashboards
- Detection of unprotected assets (ShadowIT)
- Ticketing & reporting dashboards

Detect threats automatically

- Default and customizable configurations (application policies, blacklists & whitelists...)
- Specific modules for any type of threat (powershell, ransomware...)
- Customizable detections (powershell, ransomware...)
- Mass actions on endpoints (including execution of scripts)
- Device management (USB monitoring, etc.)
- Integrated ScanDisk
- Artificial intelligence CYBERIA included (Deep Learning)

Reduce your reaction time

- Customizable filters that can be shared between teams / users
- Prioritization of alerts with CYBERIA eGuardian
- Grouping of alerts
- Endpoint vulnerabilities audits & compliance

Respond instantly to attacks

- Customizable remediation: kill, isolation, quarantine...
- Automated remediation actions (SOAR and playbooks compatible with your third-party solutions)
- TOF analysis
- Investigation & IOC Hunting

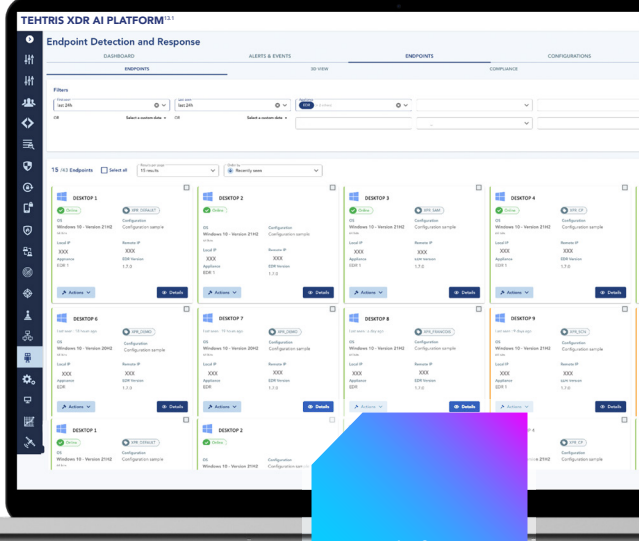

Supports all the OS, Windows, macOS, Linux

Focus on the Process Line

TEHRIS XDR Platform is 100% compatible with

MITRE ATT&CK
