

USE CASES

- Detection of incidents
- Threat Hunting
- Cybersecurity Investigation
- Remote Remediation
- Attack Surface Reduction

BENEFITS

- Faster MTTD (Mean time to detect)
- Faster MTTR (Mean time to respond)
- Integrated with TEHTRIS XDR Platform
- Remote & Centralized Management (SaaS)
- Easy to deploy and easy to use

Our **TEHTRIS MTD** solution can be easily deployed and comes with **features enabling to fight threats at the mobile device level.**

Thanks to its **constantly evolving knowledge base**, TEHTRIS MTD can **identify malicious applications**. An administrator can also use **blacklist mechanisms** to ensure that such malware are not detected. In a company that wants to scan its phones or tablets for dangerous products, this solution will be very useful.

The agents deployed in mobile devices may also **uncover vulnerabilities in the device local configuration**. Indeed, some parameters can expose the devices or make them vulnerable to specific attacks, such as developer mode, jailbreak, or even the use of an obsolete version of the operating system.

Lastly, **pulling up technical information** from mobile phones makes it possible to process it at the centralized console level, particularly for compliance purposes. Some policies or regulations may indeed require the deployment of anti-malware tools to all terminals, whether they be mobile or not.

KEY FEATURES

- Mobile Threat Scanner
- Security Policy
- Application Control
- Historical data
- Threat Hunting
- Cloud & On-Premise

SUPPORTED PLATFORMS

- Android & iOS/iPadOS
- Smartphones
- Tablets
- Chromebooks
- Televisions

FEATURES

TEHTRIS MTD virtual machine dedicated to the customer to control its mobile fleet, deployed in the TEHTRIS Cloud.

Complete maintenance operated by TEHTRIS in SaaS mode

Availability of services from anywhere on the Internet (3G/4G/5G, Wi-Fi)
Continuously updated threat knowledge bases

Real-time detection of threats with antivirus analysis as soon as an application is installed or updated, including system applications.

Analysis of application rights and permissions

Compliance with security policies

Detection of brute-force attempts

Possible deletion of the mobile phone from the console in case of loss or theft
