

TEHTRIS EPP detects and protects operating systems from known threats through advanced antivirus scanning and protection features.

USE
CASES

- Detection of incidents
- Containment of incidents & Threat Hunting
- Cybersecurity Investigations
- Remote & Local Remediation
- Attack Surface Reduction

ALL
BENEFITS

- Faster MTTD (Mean time to detect)
- Faster MTTR (Mean time to respond)
- Integrated with TEHTRIS XDR Platform
- Remote & Centralized Management (SaaS)
- Easy to deploy and easy to use

TEHTRIS EPP is a **standalone security agent** for workstations and servers, whose mission is to **protect companies against today's threats**. TEHTRIS EPP is one of the UES modules in the TEHTRIS XDR Platform.

The TEHTRIS EPP agent provides protection for your Windows workstations and servers. The threat **knowledge base** integrated into its antivirus engine is **automatically and regularly updated to optimize the security** of your systems against a large number of viruses from around the world.

TEHTRIS EPP has **detection and correction capabilities** (quarantine, deletion, network filtering). It acts as a first line of defense and can be is most of the time combined with **TEHTRIS EDR** for a more in-depth defense strategy.

Advanced features complement local antivirus protection by fighting against vulnerability exploits (including 0-days). TEHTRIS EPP fights against **targeted intrusions** that remotely exploit vulnerabilities in web browsers, office software applications such as PDF readers, etc. TEHTRIS EPP can be installed on all types of Windows devices (from Windows 7 to Windows 10, Windows Server 2008 R2 to Windows Server 2019).

More powerful than a mere antivirus, this solution protects the entire fleet, especially when combined with the unified console of the TEHTRIS XDR Platform, where multiple detection, protection and incident response policies can be adapted. This includes detection, remediation and configuration of TEHTRIS EPP.

Operating system low-level defense

KEY
FEATURES

- Next-Gen Antivirus
- Anti-Exploit
- Anti-Phishing
- Firewall
- Can be activated on TEHTRIS EDR
- Cloud & On-Premise

SUPPORTED
PLATFORMS

- Cloud Workload
- Windows Station
- Windows Server
- MacOS (roadmap)
- Linux (roadmap)

FEATURES

TEHTRIS EPP offers a **sophisticated, next-generation antivirus** with scheduled or real-time scanning and automatic signature database updates.

TEHTRIS EPP comes with an **anti-phishing** engine to monitor web browsing and email-related risks.

TEHTRIS EPP performs **behavioral analyses** to detect targeted or unknown attacks, such as 0-days.

TEHTRIS EPP **is compatible with all recent Windows versions.**

Thanks to its **Windows anti-exploit module**, TEHTRIS EPP can handle threats such as shellcodes, ROP, privilege escalation...

TEHTRIS EPP is integrated with the TEHTRIS XDR Platform containing **enhanced cybersecurity modules such as forensics, hunting, integrated SOAR, etc.**

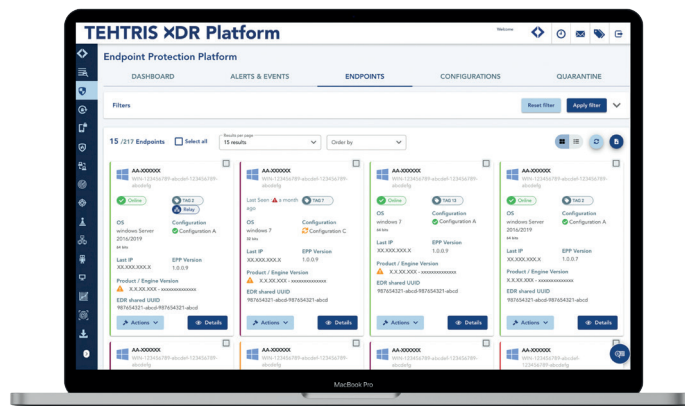

The EPP module can be installed directly on the platform from the TEHTRIS EDR module. **The bundle EDR/EPP can be customized according to each client's needs and can fit all environments.** Activating the EPP module can also be performed after deployment.

Management flows are secured between the TEHTRIS EPP agents and their management appliances.

TEHTRIS EPP appliances **can be either in "cloud" or "on-premise" mode.**

Its firewall module **allows to quickly configure a remote fleet of devices** to protect them against network attacks.
