TEHTRIS announces its expansion in Europe

After raising €20 million in Series A funding - a record in the cybersecurity field - the French scale-up aims to become the first cybersecurity unicorn in Europe.

Paris, February 1, 2022: TEHTRIS, the world leader in the automatic neutralization of cyberthreats and publisher of the first European XDR (eXtended Detection and Response) platform, announces that it will be conquering Europe, with the opening of subsidiaries in Spain and Germany this year, and the deployment of sales forces in new territories, in addition to new European partnerships, already active in Switzerland, Belgium and Luxembourg.

In the midst of the pandemic, TEHTRIS has recruited more than 160 people in 2021 and posted double-digit revenue growth, following a record €20 million Series A fundraising in 2020.

In 2022, TEHTRIS will accelerate its growth with the prospect of recruiting 200 people to support European companies and administrations in their technological arms race, aiming to protect a cyber sphere that has become a complex battle space.

In this perspective, TEHTRIS announces the opening of new offices in Germany and Spain, with the recruitment of local teams in each of these countries to develop the notoriety and the implementation of this unique technology in Europe.

At the same time, TEHTRIS technologies continue to be deployed, chosen and supported by its European partners, notably Capgemini, Orange CyberDefense, Nomios, Expleo Group, Sopra Steria, Post (Luxembourg), Approach (Belgium) and Eyra Group (Switzerland).

A platform for neutralizing cyber attacks, without human action: Sovereign by nature, Security & Ethics by Design.

According to the ANSSI, the number of ransomware attacks in France has increased by 255% in 2021, mainly in the health and education sectors.

To face this landscape where the threat is complex and virulent, French companies and administrations need to hyper-automate detection and remediation tasks to focus their security teams on high value-added missions.

In this context, TEHTRIS has developed the TEHTRIS XDR Platform, the first XDR (eXtended Detection Response) solution designed in Europe and the only one in the world to be natively coded. The detection, analysis and neutralization of ransomware, cyber attacks and unusual or malicious behavior are anticipated and performed autonomously and instantly for known and new threats without human action (no click required). It is currently the most open platform to market solutions via its APIs.

TEHTRIS XDR Platform is a sovereign solution by nature. Protecting the files and data of its international customers without reading their content, it is developed and hosted in France and in Europe. Through its collaboration with OVHCloud's Open Trusted Cloud, TEHTRIS offers its customers solutions hosted on a sovereign cloud.

TEHTRIS XDR Platform is already used worldwide by international groups, public administrations (ministries, local authorities...), and has obtained the Cybersecurity Made in Europe label. TEHTRIS is also the only vendor in the European Union recognized by Gartner® as a representative XDR vendor in the Market Guide for Extended Detection and Response 2021*.

"Our international development strategy is based on our holistic and highly automated solution: the TEHTRIS XDR Platform. This solution enables all organizations to automatically fight against cyber espionage and cyber sabotage to address unknown threats, while preserving their Digital Sovereignty", comments Elena Poincet, co-founder and CEO of TEHTRIS.

Beyond Europe, TEHTRIS continues its development with the installation of technical teams in Vancouver and Singapore, thus completing its editor support offer on all time zones.

About TEHTRIS

Founded in 2010, TEHTRIS is a leading global provider of automated, non-human action cyber attack neutralization with the TEHTRIS XDR Platform. With its "Security & Ethics by design" engineering, this solution provides cybersecurity specialists with a holistic view of their infrastructure, while guaranteeing the confidentiality of their data. OPEN XDR, it is compatible with the security solutions of the market through its APIs. Thanks to its technology, TEHTRIS is positioned as a European trusted third party. With its international partners, TEHTRIS XDR Platform monitors, analyzes, detects and neutralizes threats in more than 100 countries for the benefit of major players in industry, transportation, engineering and services, and government. By constantly monitoring cybercrime and listening to its customers, our goal is to reduce the risks as much as possible, in order to face the unpredictable.
