

## **TEHTRIS receives Starcheck and SKD Labs "Product Excellence 2021" certifications for its EDR, EPP & MTD software**

*The French scale-up presents excellent performance results of its cybersecurity products for detection and response to cyber attacks.*

**Paris, February 4 2022:** TEHTRIS, the global leader in automated cyber threat neutralization and publisher of Europe's first XDR (eXtended Detection and Response) platform, announced that it has received Starcheck certification and the SKD Labs Product Excellence Award 2021 for three of its sovereign products. The company's Endpoint Detection & Response (EDR), which has been providing automatic real-time detection and remediation of known and unknown threats since 2013, has been certified for the 6th consecutive year, while two other products, TEHTRIS EPP (Endpoint Protection Platform) and TEHTRIS MTD (Mobile Threat Defense), have undergone performance testing for the first time.

As part of its commitment to quality and transparency on the performance of its software in a complex competitive market, TEHTRIS has submitted three of its products to the independent testing laboratory SKD Labs to measure their performance. The excellent results obtained are the result of several hundred tests performed:

- SKD Labs certifies the excellent ability of TEHTRIS EDR (Endpoint Detection Response) to detect malware and protect endpoints with a malware detection and blocking rate that reached 100%, combined with a ransomware detection and blocking rate that reached 100% on the test phases performed. The laboratory accredits the absence of false positives in the test phases.
- SKD Labs certifies the excellent ability of TEHTRIS MTD - the Mobile Threat Defense tool known to the public for its ability to detect Pegasus spyware - to detect malware and protect mobile devices with a malware detection rate of 99.39%. The lab accredits its excellent monitoring and real-time alerts, as well as its ability to monitor and control mobile application permissions.
- SKD Labs certifies the excellent ability of TEHTRIS EPP (Endpoint Protection Platform) - the NextGen antivirus provided by the company - to detect malware and protect endpoints with a malware detection rate of 99.96% and a Ransomware detection rate of 100%. It accredits the absence of false positives noted on the test phases.

**These products are key modules of the TEHTRIS XDR Platform, an eXtended Detection Response platform that automatically neutralizes cyber attacks without human action.** TEHTRIS is the only vendor in the European Union to be recognized by Gartner® as a representative XDR vendor in the Market Guide for Extended Detection and Response 2021\*, and the only vendor in the European Union to be recognized by Gartner® as a representative Mobile Threat Defense vendor as part of an EPP or UES (Unified Endpoint Security) offering in the Market Guide for Mobile Threat Defense 2021.\*\*

The first XDR solution in Europe and the only one in the world to be natively coded, the TEHTRIS XDR Platform detects, analyzes and neutralizes ransomware, cyber attacks and unusual or malicious behavior in an anticipated, autonomous and instantaneous manner for both known and unknown threats. And this, without any human action (no click required). It is currently the most open platform to market solutions via its APIs.

The TEHTRIS XDR Platform is a sovereign solution developed and hosted in France and in Europe. It protects files and data without reading their content. Through its collaboration with OVHCloud's Open Trusted Cloud, TEHTRIS offers its customers solutions hosted on a sovereign cloud.

## About TEHTRIS

Founded in 2010, TEHTRIS is a global leader in the automated, human-less neutralization of cyberattacks with the TEHTRIS XDR Platform. With its "Security & Ethics by design" engineering, this solution provides cybersecurity specialists with a holistic view of their infrastructure, while guaranteeing the confidentiality of their data. OPEN XDR, it is compatible with the security solutions of the market through its APIs. Thanks to its technology, TEHTRIS is positioned as a European trusted third party. With its international partners, TEHTRIS XDR Platform monitors, analyzes, detects and neutralizes threats in more than 100 countries for the benefit of major players in industry, transportation, engineering and services, and administrations. By constantly monitoring cybercrime and listening to its customers, our goal is to reduce the risks as much as possible, in order to face the unpredictable.

## About SKD LABS

SKD Labs is an independent laboratory specializing in functionality testing, performance validation and certification of information security products and services. Member of the AMTSO (Anti-Malware Testing Standards Organization) and Board Member of AVAR (Association of Anti Virus Asia Researchers), the laboratory is ISO/IEC 17025 accredited and its certification is recognized by Microsoft Virus Initiative.
